CHAPTER TWO

TRUMAÍ SUBSISTENCE AND TECHNOLOGY

Vital Statistics

The population of the Trumaí village in 1938 was 43. This figure includes the 3 foreign women in residence and excludes those few Trumaí who were living with other groups. There were 17 men, 16 women, and 10 pre-pubescent children, of whom 8 were male and only 2 were female. Due to the previously mentioned capture and forced marriage of Trumaí women, the average age of females seems to have been considerably greater than that of males. Two men were considered by the Trumaí as old, while four women were placed in that category. This disparity of age undoubtedly had an influence on the Trumaí birth rate.

Infant mortality seems to have been high, and Quain was of the opinion that it was further aggravated by abortion and infanticide. The fact that there were eight male children and but two girls suggests that infanticide must have been practiced only upon females. Quain's notes, however, give no indication that this was the fact. Pulmonary diseases have devastated all the groups of the upper Xingú, but the drop in the Trumaí population from 43 in 1938 to 25 in 1948 is probably not paralleled in the other villages during that time.

Village and Gardens

The Trumaí settlement was located a scant half-mile from a lagoon that opened directly upon the east shore of the Kuluene just a few miles away. The mouth of the lagoon was narrow, but it broadened out into a lake of moderate size with many small bays and was ringed with swamps. Proximity to the river made insects a continual nuisance during the rainy season. The Kamayurá village, located near the sandy beaches of a lagoon lined with *buriti* palms, was relatively free of insects.

The village consisted of four houses and another under construction. Between the houses and the surrounding forest lay an area of weeds and low underbrush into which refuse was thrown. The ground within the ring of houses was kept comparatively free of weeds and litter. The village "plaza" was about 200 feet wide. In the center were the log bench and fireplace of the men's gathering place. Nearby was a conical wicker cage in which the village harpy eagle was kept for its feathers, which were used in ceremonies.

421 437 524 [15] [52] It was significant that Aloari, probably the most aggressive person in the village, was often an organizer and always a main participant in the games. On the other hand, he never cooperated in group work.

This conventionalized form of exchange, which Quain called the trade game, had a strong functional role in Trumaí culture, but there are indications that it was of outside origin. One informant said that it was [177] a Bakairí custom, and Quain thought that the "game" might have been introduced by Bakairí traders bringing goods from the Indian post on the Paranatinga River.[1]

The Household

171 96 622 Among both the Waurá and the Kamayurá the extended family occupied its own house, and the head of the lineage was considered a sub-chief of the village.[2] Such unilocal, co-resident and extended family groupings, which were typical among tribes of the upper Xingú, were absent in the Trumaí village.

592 613 Consanguineally close male relatives usually formed co-resident units, but these nucleii of kinsmen were very small and did not constitute an entire household. Furthermore, they were related to each other through [59] male or female lines. Due to village patrilocality, there was a tendency for patrilineally related males to live together, but this did not result in [165] the establishment of a patrilineal lineage for several reasons. Among them the high death rate was very important.

592 594 Maibu's house illustrates the eclectic nature of the Trumaí household. Four nuclear families, totaling fourteen people, lived in it. Hanging their hammocks from one of the two center posts were Katauka, his son Kamkuti, his brother's son Autsuki, and another brother's son and his wife. At the opposite end of the house were Maibu and his wife, the wife's son by Maibu's deceased brother, Maibu's sister Ayenuke, Makurawa, a classificatory sister's son, and Makurawa's wife and their three children. Although everyone in the household was related, bonds were closer between those people who hung their hammocks from the same post.

589 592 182 Despite the fact that the household, as a unit, had no specific functions, it established the framework within which certain interpersonal dependencies were worked out. Bride-capture, intertribal warfare, divorce, and early death caused a significant proportion of the Trumaí to be temporarily or permanently without mates. This disadvantage was

[177] [1] The trade game was possibly borrowed from the Bakairí, as its existence among this group has been reported by Oberg (1953, p. 73). However, craft specialization and trade on the upper Xingú predates the Indian post. Cf. von den Steinen 1897, pp. 196, 207.

[2] De Lima (1950, p. 9.) reports this arrangement among the Waurá, and Oberg (1953, p. 45.) adds that the position of house chief tends to pass in the male line in the Kamayurá village.
